

# RESUMEN DE DATOS CNAA

Región **O'Higgins**, febrero 2025

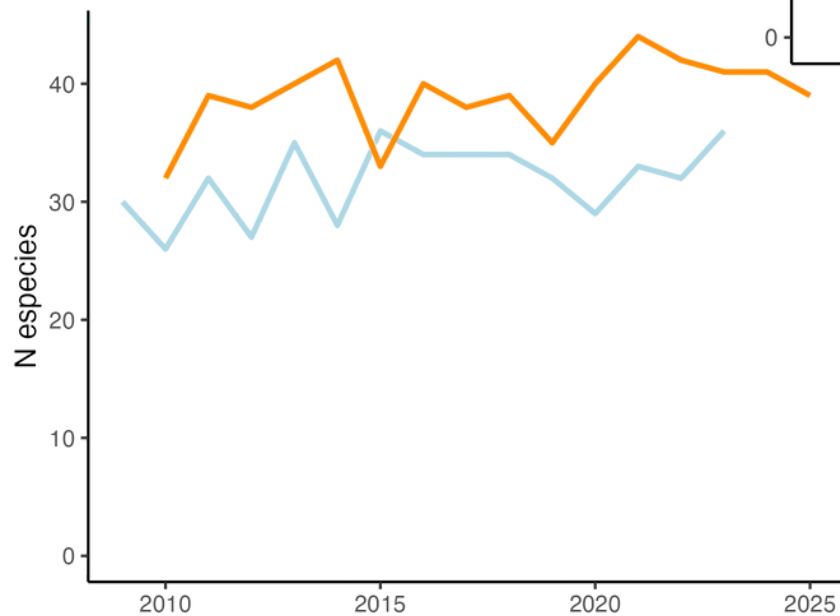

Desde el 2009 la ROC coordina el Censo Neotropical de Aves Acuáticas en Chile. Entre julio de ese año y febrero del 2025, se han realizado 31 censos en la región; 16 en verano y 15 en invierno.

Censo

Invierno

Verano

La riqueza de aves acuáticas registradas a nivel regional en cada censo ha variado entre 26 y 44 especies. A simple vista se percibe un aparente patrón de mayor riqueza durante los censos de verano comparado con el invierno.

Presentamos los datos crudos de abundancia total de individuos registrados por censo a nivel regional. Es importante mencionar que NO recomendamos realizar interpretaciones biológicas de estos datos crudos ya que el número de individuos registrados en cada censo está influenciado por el número de sitios censados en esa temporada, cuáles sitios fueron censados y variaciones anuales estocásticas de grandes agrupaciones de algunas especies gregarias.
